

Electrocardiography (ECG)

The same The opposite

-Deflection to ⊖ or ⊕ Depends on the charges of the propagating current.

'Resting state'

Na [High Con.]

Electrical Neutrality [⊕ = ⊕]
-5

Na↑
K↑ 95%

channels
Leaky voltage-gated ligand-gated

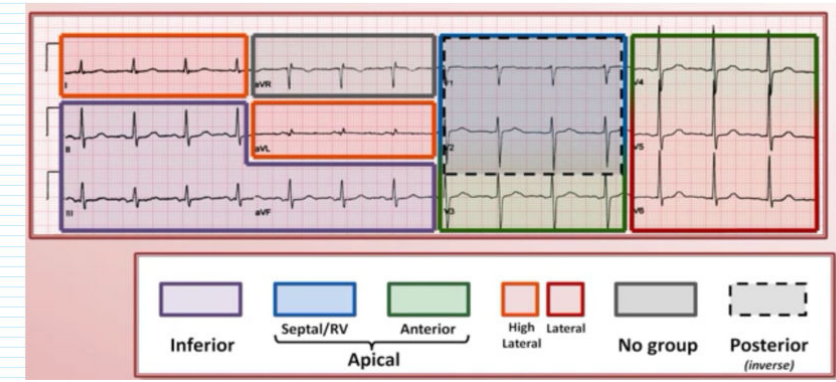

Chemical force = Electrical force
[Conc. Gradient]

Leaky K+ channels
Losing ⊕ charge → more -ve Inside the cell

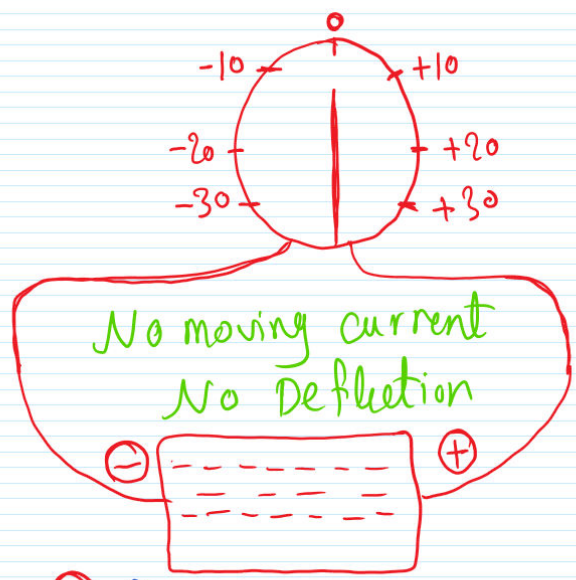

Bi uni chest

Diff. of voltage Between 2 Electrodes

1 At Resting state: (II)

2 Atrial Depolarization: (-) R

$\oplus \rightsquigarrow \oplus$
↓
positive Deflection

\oplus Lf

Normal cardiac conduction system

specialized Myocardium

③ AV conduction:
very low Amplitude
[silent AP]
↓
Isoelectric

④ septal Depolarization: Lf → Rt
⊕ → ⊖
↓
Negative deflection

⑤ Myocardial Depolarization:
subendocardium → Epicardium
⊕ → ⊕
↓
positive deflection

⊕ Higher Amplitude
[larger Ms Mass]
⊕ Narrow [Na channels]

⑥ Basal Depolarization:

⑦ Ventricular Repolarization:

→ The last part to be Depolarized will be the first part to be Repolarized.

⊗ Wide & Broad
[K channels are slow]

⊗ Atrial Repolarization is masked by ventricular Depolarization.

Intervals = Waves + segments

Atrio ventricular conduction full cardiac cycle

Both waves are one large square in duration (0.2 seconds), but the second wave is twice the voltage of the first (1 mV compared with 0.5 mV). The flat segment connecting the two waves is five large squares ($5 \times 0.2 \text{ seconds} = 1 \text{ second}$) in duration.

$$300 \text{ LS/min}$$

$$300 \text{ LS/60s}$$

$$\text{LS} = \frac{60}{300} = \frac{1}{5} = ,2s$$

$$\text{LS} = 5 \text{ ss}$$

$$\text{ss} = \frac{,2}{5} = ,04s$$

$$\text{Each ss} = ,1 \text{ mV}$$

$$\text{Each LS} = ,5 \text{ mV}$$

$$2 \text{ LS} = 1 \text{ mV}$$

1) Rhythm:

* Normal sinus Rhythm:

A - HR 60-90

60 < 100

Bradycardia tachycardia

B - Regular [origin of impulse is S.A node]

- p wave is followed by QRS [each atrial Activity is followed by ventricular Activity]

D - Normal conduction system

D) Rhythm:

* Normal sinus Rhythm:

A - HR 60-90

60

< 100

Bradycardia

Tachycardia

B - Regular [origin of impulse is S.A node]

- p wave is followed by QRS [each atrial Activity is followed by ventricular Activity]

D - Normal conduction system

Rhythm

Regular

Distance Between 2 successive R

Normal Sinus Rhythm (NSR)

Right \longrightarrow Reach [RVH & RBBB]

Arrhythmia

① Sinus Arrhythmia:

↑ Automaticity [fever, coffee, Hyperthyroidism]

↓ Automaticity

≥ 3 diff p wave Morphology

> 100

Multifocal Atrial tachycardia

Avoid BB

COPD

↑ Automaticity [fever, coffee, Hyperthyroidism]
↓ Automaticity
≥ 3 Diff P wave Morphology
Multifocal Atrial tachycardia

Avoid BB
CCPD

2 Atrial Arrhythmias:

- Multifocal Atrial tachy
- Atrial Flutter [Regular]
- Atrial fibrillation [Irregular]

4 ventricular Arrhythmia:

Ischemia
↓
Loading with ions
↓
Generate AP

- ventricular premature Beat
- ventricular tachycardia
- ventricular flutter
- ventricular fibrillation

No Retrograde conduction in A-V node

Electrolytes Imbalance [Hypokalemia & Hypomagnesaemia]

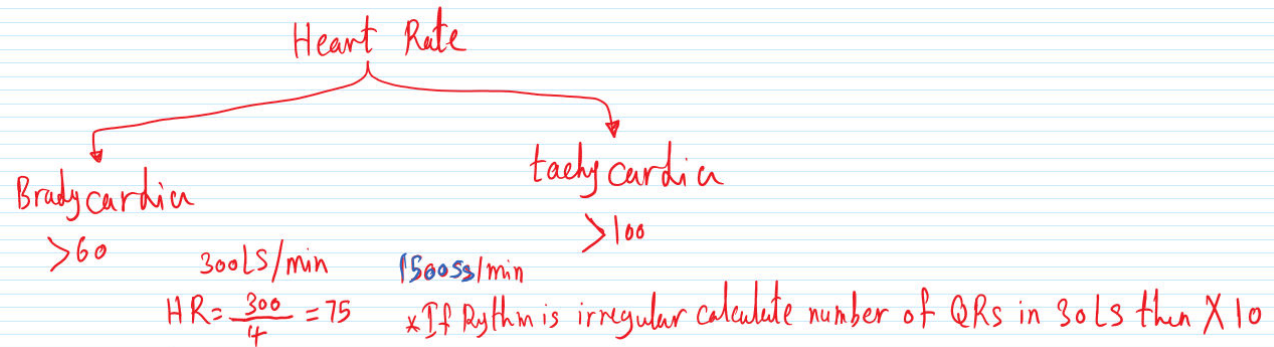

vs

↑ QT → polymorphic ventricular tachycardia
Torsades de pointes
twisting of points

Abnormal conductive pathway [wide QRS with Abnormal Morphology]

PP Interval 0.15s

PR Interval 5ss = 1LS

⊗ prolonged PR Interval > 5ss

* shortening of PR Interval < 3 ss

- WPW [pre-excitation synd.] [Bundle of Kent]
Abnormal connection
Between Atria & ventricle
[fast conduction]

* WPW pattern:

- 1- Delta wave
- 2- shortening of PR interval
- 3- wide QRS.

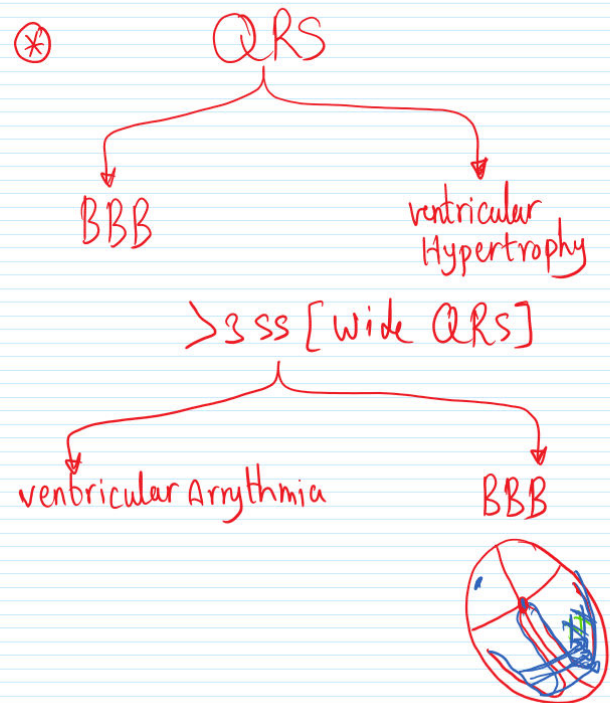

supraventricular tachycardia

BB
CCB
Digoxin

Get Worse

Rt chest Leads

Typical change in morphology of QRS complex from leads V1 to V6

* Reversal of Normal Morphology: R
RBBB [wide QRS, RSR] 
RVH

BBB

- RBBB
wide QRS
RSR in V1, V2
- LBBB
wide QRS
RSR in V5, V6

Right Bundle Branch Block (RBBB).

LBBB

ventricular Hypertrophy

RvH
